

Marios Loukas, MD, PhD, received his medical degree from Warsaw University School of Medicine, and a PhD from the Institute of Rheumatology at the Department of Pathology in Warsaw, Poland. He held a postdoctoral position at Ulm University Clinic in Germany and studied arteriogenesis. Dr. Loukas began his academic career at Harvard Medical School, where he served as lecturer and laboratory instructor for the Human Body Course. In 2005, he joined St. George's University (SGU) in Grenada and shortly after became Professor and Chair of the Department of Anatomical Sciences. In 2012, Dr. Loukas was appointed Dean of Research for the School of Medicine at SGU. One of his main responsibilities is to develop a transdisciplinary research infrastructure to support translational research and to bridge basic science and clinical departments with the aim of enhancing student research. Dr. Loukas has published several papers in peer-reviewed journals, authored 12 books, including *Gray's Anatomy Review*, *Gray's Clinical Photographic Dissector of the Human Body*, *McMinn and Abrahams' Clinical Atlas of Human Anatomy*, *History of Anatomy*, and *Bergman's Comprehensive Textbook of Human Variation* and has authored 18 chapters in various medical and surgical textbooks, including *Gray's Anatomy*. He has also served as an editor and co-editor for several journals. He is Co-Editor of the journal *Clinical Anatomy* and the Editor-in-Chief of the journal *Translational Research in Anatomy*. In 2015 he was elected President of the American Association of Clinical Anatomists and in February of 2015, Dr. Loukas was named Dean of Basic Sciences at St. George's University School of Medicine.
